TECHNICAL TOOLKIT

Data Engineering

SQL · PostgreSQL · Snowflake
dbt · DuckDB · ETL/ELT · Parquet

Analysis & Modelling

Python (Pandas, scikit-learn)
R (lme4, mgcv) · Gradient Boosting
Time Series · SARIMA · Mixed-Effects

BI & Reporting

Power BI · DAX · Tableau
Shiny · Quarto · Plotly · Excel

Practice

Data Quality & Validation
Git · Agile/Scrum · IoT/Sensor Data

EDUCATION

MSc Data Science (In Progress)

University of Nairobi · Exp. 2027

Research: time series forecasting, financial analytics, applied machine learning.

BSc Chemistry (Honours)

University of Nigeria, Nsukka · 2015

WHAT I BRING

- **Pipelines that hold up.** Validation and testing built in — 15 passing dbt tests across a 458K-row production pipeline.
- **Rigour over flattery.** Scaffold-aware validation, honest power caveats, and published negative results where the data didn’t support the hypothesis.
- **Analysis that reaches a decision.** Dashboards and reports built for the operator and the executive, not just the notebook.
- **Domain range.** IoT and EV infrastructure, e-commerce, enforcement operations, hospitality, and scientific data.

Professional Summary

Analytics Engineer with 5+ years of end-to-end experience designing data pipelines, warehousing solutions, and BI dashboards across IoT, EV infrastructure, technology, hospitality, and fitness sectors. Raised data accuracy from 78% to 94%+ on production sensor pipelines and cut reporting cycle times by over 60% through SQL and Python automation. Independently built and published portfolio projects applying machine learning, longitudinal modelling, and time series methods to real datasets. Background spans sales, hospitality operations, and entrepreneurship prior to analytics. Currently completing an MSc in Data Science at the University of Nairobi.

Professional Experience

Analytics Engineer

EVINET · Sep 2023 — Oct 2024 · Abu Dhabi, UAE

- Built and maintained ETL pipelines ingesting real-time telemetry from EV charging stations into a centralised Snowflake warehouse, enabling sub-hourly operational reporting.
- Delivered Power BI dashboards tracking uptime, session throughput, energy consumption, and fault frequency — the primary SLA reporting interface for commercial and operations teams.
- Implemented a multi-layer validation framework on IoT sensor streams, improving reliability of downstream analytics.
- Automated grid utilisation reporting workflows, saving an estimated 15+ hours per reporting cycle.

Data Analytics Consultant

DRÖP 10 Fitness & Bar · Oct 2022 — Aug 2023 · Dubai, UAE

- Designed customer analytics dashboards tracking acquisition, retention, churn risk, and lifetime value — directly informing pricing and promotional strategy.
- Built automated pipelines unifying POS, booking, and revenue sources into a single reporting layer.
- Ran cohort and segmentation analysis across 1,000+ members, enabling targeted retention campaigns.

Technical Systems Analyst

Scansmart Technologies · Feb 2022 — Aug 2023 · Dubai, UAE

- Raised data accuracy from ~78% to 94%+ — a 16-point gain sustained in production — by designing and implementing validation and data quality pipelines.
- Automated report generation in SQL and Python, cutting reporting cycle time by 60%+.
- Built Power BI dashboards for throughput, uptime, and recognition rates; standardised schemas across client deployments.
- Led BI tool adoption across engineering and commercial teams.

Founder & Trainer

Charles Barista Academy · Jan 2022 — Oct 2024 · UAE (concurrent)

- Founded and ran a barista training academy alongside a full-time analytics career — curriculum design, operations, scheduling, and client relationships, independently managed.
- Closed the academy in Oct 2024 upon relocating from the UAE.

Commercial Analytics Lead

The Usual Café · May 2020 — Feb 2022 · Dubai, UAE

- Built dashboards tracking revenue, customer traffic, product mix, and labour efficiency from raw POS data.
- Developed inventory forecasting models that reduced waste using historical sales trends and seasonal demand patterns.

Barista

Chocolate Dose Café · 2019 — May 2020 · Fujairah, UAE

- High-volume café service; the operational grounding later applied to café analytics and business ownership.

Sales Coordinator

Fero Mobiles · Mar 2018 — Mar 2019 · Lagos, Nigeria

- Coordinated sales operations and reporting, supporting the team’s shift toward structured, data-informed process.

Sales Representative

Fero Mobiles / Etisalat · 2017 — Mar 2018 · Lagos, Nigeria

- Sold mobile products and services, starting at Etisalat before moving to Fero Mobiles.

Chemistry & Physics Teacher

Lexington High School · 2015 — Dec 2016 · Lagos, Nigeria

- Taught Chemistry and Physics — the grounding in careful measurement and hypothesis validation that still shapes how I approach data.

Selected Projects

Parking Enforcement Analytics

Python · dbt · DuckDB · Power BI · SARIMA

End-to-end pipeline on ~458K anonymised vehicle-scan enforcement events; 15 passing dbt tests across staging and mart layers. Surfaced a fleet-wide map-coverage gap (5.2–11.5% by unit) and workload concentration in the review funnel (12,327 scans → 461 flagged → 43 escalated).

Aqueous Solubility Prediction — AqSolDB

Python · RDKit · PostgreSQL · Gradient Boosting

Predicted aqueous solubility across 8,643 curated compounds under scaffold-aware validation. Gradient Boosting ($R^2=0.74$) outperformed linear baselines in all 10 repetitions; calibration analysis identified systematic prediction compression at solubility extremes, and a hypothesised aromaticity effect was reported as a negative result once properly controlled.

Training, Sleep & Recovery in Recreational Runners

R · lme4 · Shiny · Quarto · ~12,760 participant-days

MSc capstone: four-year longitudinal Garmin study of 14 runners. Mixed-effects modelling identified sleep architecture (deep+REM proportion) as the strongest within-person predictor of next-morning recovery ($\beta=0.0098$, $p=0.0017$). Published as a live Shiny dashboard and Quarto report.

Olist E-Commerce Analytics

PostgreSQL · SQL · Power BI · Python

Star-schema warehouse and 17-query analytical layer over 100K+ Brazilian orders, with cohort and Pareto analysis feeding a three-page executive Power BI dashboard.
