

AGU CHARLES CHIBUIKE

Analytics Engineer · Data Pipeline Specialist

agucharles91@yahoo.com | +254 743 010 351 | Nairobi, Kenya | agucharles91-cpu.github.io

PROFESSIONAL SUMMARY

Analytics Engineer with 5+ years of end-to-end experience designing data pipelines, warehousing solutions, and BI dashboards across IoT, EV infrastructure, technology, hospitality, and fitness sectors. Demonstrated ability to raise data accuracy from **78% to 94%+** and cut reporting cycle times by over **60%** through SQL/Python automation. Independent portfolio projects apply longitudinal data modelling and time series methods to real-world datasets. Currently completing an MSc in Data Science (University of Nairobi) with a research interest in time series forecasting and financial analytics.

CORE COMPETENCIES

SQL & Query Optimisation	dbt (Data Build Tool)	PostgreSQL & Snowflake	ETL / ELT Pipelines
API Data Ingestion	Power BI & Tableau	Python (Pandas) & R	Advanced Excel
Data Quality & Validation	Time Series Analysis	Mixed-Effects Modelling	IoT / Sensor Data

PROFESSIONAL EXPERIENCE

Analytics Engineer | EVINET

Sep 2023 – Oct 2024 · Abu Dhabi, UAE

- Developed and maintained ETL pipelines ingesting real-time telemetry from EV charging stations into a centralised Snowflake data warehouse, enabling sub-hourly operational reporting.
- Built Power BI dashboards monitoring uptime, session throughput, energy consumption, and fault frequency — the primary SLA reporting interface for commercial and operations teams.
- Implemented a multi-layer data validation framework on IoT sensor streams, surfacing anomalies and improving data reliability for downstream analytics.
- Automated grid utilisation and performance reporting workflows, eliminating manual preparation and saving an estimated 15+ hours per reporting cycle.
- Partnered with engineering leads to define KPI frameworks aligned with operational SLAs and commercial targets, translating business requirements into measurable data models.

Data Analytics Consultant | DROP 10 Fitness & Bar

Oct 2022 – Aug 2023 · Dubai, UAE

- Designed and deployed customer analytics dashboards tracking acquisition, retention, churn risk, and lifetime value (LTV) — directly informing pricing and promotional strategy.
- Built automated reporting pipelines integrating POS, booking, and revenue data sources into unified dashboards, replacing fragmented manual reporting.
- Conducted cohort and segmentation analysis across 1,000+ members to identify high-value customer groups and early-stage churn signals, enabling targeted retention campaigns.
- Tracked MRR, revenue per member, and utilisation rates; delivered insights supporting measurable improvements in scheduling efficiency and member engagement.

Technical Systems Analyst | Scansmart Technologies

Feb 2022 – Aug 2023 · Dubai, UAE

- ▶ Supported ETL workflows transforming raw ANPR sensor logs into structured analytical datasets, underpinning system performance reporting across multiple client deployments.
- ▶ Improved data accuracy from ~78% to 94%+ by designing and implementing validation and data quality pipelines — a 16-percentage-point gain sustained across production.
- ▶ Automated report generation using SQL and Python, reducing reporting cycle time by 60%+ and freeing engineering capacity for higher-value work.
- ▶ Built Power BI dashboards tracking throughput, uptime, and recognition rates; standardised data schemas across deployments, improving cross-site consistency and auditability.
- ▶ Led BI tool adoption across engineering and commercial teams, delivering training and documentation that accelerated time-to-insight for non-technical stakeholders.

Commercial Analytics Lead | The Usual Café

May 2020 – Jan 2022 · Dubai, UAE

- ▶ Designed Excel dashboards tracking revenue, customer traffic, product mix, and labour efficiency — converting raw POS data into weekly operational reporting for management.
- ▶ Developed inventory forecasting models that reduced waste and improved cost efficiency using historical sales trends and seasonal demand patterns.
- ▶ Delivered margin analysis, peak-hour optimisation insights, and staffing recommendations, directly informing scheduling decisions and transaction value improvement initiatives.

KEY ACHIEVEMENTS

- ▶ Raised data accuracy from 78% to 94%+ — a 16-point gain — through structured validation frameworks applied across ANPR and IoT sensor pipelines.
- ▶ Cut reporting turnaround time by 60%+ via SQL/Python automation, freeing significant engineering and analyst capacity across multiple roles.
- ▶ Designed and executed a self-initiated 4-year longitudinal wearable analytics study (~12,760 observations, 14 participants) applying mixed-effects models and time series methods in R and Python.
- ▶ Delivered end-to-end IoT analytics infrastructure for EV charging operations, enabling real-time SLA monitoring at scale.
- ▶ Produced customer segmentation insights at DROP 10 that informed targeted retention strategies across a 1,000+ member base.

SELECTED PROJECTS

Training, Sleep & Recovery Dynamics in Recreational Runners — [agucharles91-cpu.github.io](https://github.com/agucharles91-cpu)

- ▶ Self-initiated longitudinal analytics study analysing ~12,760 Garmin wearable observations from 14 recreational runners in Nairobi over four years (2022–2026), covering RHR, sleep architecture, Body Battery, GPS session data, and VO_2max .
- ▶ Applied linear mixed-effects models (lme4/lmerTest) with random intercepts per participant, identifying sleep architecture quality (Deep+REM%) as the strongest within-person predictor of next-morning cardiovascular recovery ($\beta = 0.010$, $p = 0.002$).
- ▶ Conducted lag-structure analysis across 3-day windows and autocorrelation function analysis, revealing a Day+3 supercompensation arc and multi-week oscillatory recovery patterns consistent with implicit periodisation cycles.
- ▶ Delivered via a Quarto-rendered report with literature citations and a live interactive Shiny dashboard for public exploration of the dataset.

Sales Performance & Customer Analytics Dashboard

- ▶ Designed an end-to-end sales analytics solution integrating CRM and transactional data into unified data models covering customer, transaction, and pipeline datasets.
- ▶ Developed dashboards tracking revenue growth, conversion rates, CAC, and LTV; cohort and segmentation analysis identified high-value customers and churn cohorts.
- ▶ Translated analytical outputs into actionable recommendations on pricing, promotions, and pipeline prioritisation.

EDUCATION

MSc Data Science *(In Progress)*

Expected 2027

University of Nairobi · Reg: SDS6/49489/2025 · Research interest: time series forecasting, financial analytics, applied machine learning

BSc Chemistry (Honours)

2015

University of Nigeria, Nsukka

CERTIFICATIONS

Google Data Analytics Professional Certificate · Agile & Scrum Fundamentals · *dbt Fundamentals (In progress)*
